## **Abstract**

Now days in many public places such as malls, multiplex system, hospitals, offices, market areas there is a crucial problem of keeping a track users who park their vehicles in the parking space. The public vehicle parking area has several vehicles with various categories. So keeping a record of all the vehicles entering and exiting daily involves a lot of manual labour and investment. And there is a greater chance of this manual records being misplaced.

Therefore, the Vehicle Parking Management System project aims at solving these problems by designing a web based application system that focuses mainly on keeping track of vehicle's parking. It's an easy procedure for the Admin to retrieve the data of the vehicle that has been visited throughout the day. The system displays all the vehicle's entry and outgoing records. In addition, the system allows adding vehicle categories too. This project only contains an admin panel. In an overview of this web application, an admin has all control over the system. He/she helps to maintain the flow of the system. An admin can simply add vehicle categories by providing category names. After the management of vehicle categories, the admin can simply insert the vehicle's entry. For this, he/she has to enter the vehicle's number, model name, category, and owner's information. The system will also help to calculate total fine charge for a particular vehicle. The aim is to automate its existing manual system by the help of computerized equipment and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same.

## **INTRODUCTION**

The "Vehicle Parking Management System" has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and in some cases reduce the hardships faced by this existing system. Moreover this system is designed for the particular need of the company to carry out operations in a smooth and effective manner.

The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus by this all it proves it is user-friendly. This system, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus it will help organization in better utilization of resources.

### **Overview of the system:**

#### **1. Managing Vehicle's Parking and Parking Receipts**

After setting up the vehicle's parking, now the user can manage outgoing vehicles. The system lists out all the entry and outgoing vehicle records. Here, the user can simply take an action for checking out the parking. In order to exit a vehicle's parking, the user has to enter the total parking charge with remarks. Once a vehicle exits the parking, those records can be found under the outgoing vehicle records. Here, the system generates invoice receipts for each and every vehicle. The user can view details of each available vehicle. Also, the user can view and print out the parking receipt of each. Each record consists of parking number, total charge, vehicle registration number, owner details, and more.

#### **2. Reports, Earning Collections and More**

On the other hand, an admin can list out the reports between dates. These reports help out to state vehicle's parking records between the selected dates. The steps are simple, the user only needs to select from and to date. And after that, the system displays it all between those mentioned dates where the user can also view their details. Additionally, the admin can view total earnings to date. And also, the system displays the current date and yesterdays' total earning. He/she can search out the vehicle's record using the vehicle's

registration number from the sidebar. Besides, an admin can have an overview records of the total vehicle's entry with a number of in and out vehicles and total parking within a 24 hours span time. The system represents overall records using graphical charts like piechart to present a summary of records.

### 3. Update Account Information, Password

And finally, this whole section will be about additional features in this system. This system allows updating the user's profile where he/she can update his/her name and contact details. Also, an admin can change the password by entering the current password with a new and confirmation password. The last feature is about company information. The system allows the user to update company settings. It includes of company's name, the company's email address, website URL, and company's address.

#### **Available Features:**

- Manage Vehicle's Category
- Vehicle's Entry
- Manage Outgoing Vehicles
- Set Parking Charge
- Parking Receipts
- View Reports
- Total Earnings
- Search Parking Details
- Graphical Representations
- Update Profile, Company Details
- Change Password

## SCOPE

In the modern age. Many people have vehicles. Vehicle is now a basic need. Every place is under the process of urbanization. There are many corporate offices and shopping centers etc. There are many recreational places where people used to go for refreshment. So, all these places need a parking space where people can park their vehicles safely and easily. Every parking area needs a system that records the detail of vehicles to give the facility. These systems might be computerized or non-computerized. With the help of computerized system we can deliver a good service to customer who wants to park their vehicle into the any organization's premises.

Vehicle parking management system is an automatic system which delivers data processing in very high speed in systematic manner. Parking is a growing need of the time. Development of this system is very useful in this area of field. We can sell this system to any organization. By using our system they can maintain records very easily. Our system covers the every area of parking management. In coming future there will be excessive need of Vehicle parking management system.

### **Problem Statement:**

- Now a days in parking like valet parking they maintain just with the tokens and they have records the vehicle details in books so that during some critical situations like police enquiry of vehicle robbery that case it is difficult to find the details of particular vehicle but in this case is easy to find in 1 to 2 seconds.
- By parking the vehicle in public place the vehicle can be claimed by towing person but in this case there is no towing problems and no need to give fine for anything we can park our vehicle with securely.

### **Objectives:**

The main objective of the Project on Online Car Parking System is to manage the details of Car, Parking, Parking Space, Parking Slots, Parking Fees. It manages all the information about Car, Car Number, Parking Fees, Car. The project is totally built at administrative end and thus only the administrator is guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the Car, Parking, Car Number, Parking Space. It tracks all the details about the Parking Space, Parking Slots, Parking Fees.

### **Goals:**

- To satisfy the user requirements
- Be easy to understand by the user and operator
- Be easy to operate
- It must have a good user interface
- Must be expandable
- To deliver the system on schedule.

# REQUIREMENTS

## User Requirements:

The user requirement can be defined as the business needs for what users require from the system (VEHICAL PAKRING SYSTEM). The user requirements are listed as below:

1. The system should be accessible every working day
2. The staff can access to the system as long as they have their username and password.
3. The system should be easily navigated.
4. The system should allow the admin to print the reports of the customer details and fines.
5. The system should allow customers to view the fines and get updation.
6. Admin should be able to update the information of the customer through the system.

## Functional Requirements:

ID	Requirement
FR01	Only authenticated admin must be able to access the system.
FR02	Admin must be able to Register new customers for the service and enter their personal and vehicle details.
FR03	The system must help to View/Read and find the exist customers.
FR04	Admin must be able to Define new parking areas, specify a range of parking lots, the parking cost per minute/hour, and other details.
FR05	Parking operator must be able to Issue bills to users on checkout.
FR06	Backend management system must be able to enable modification of parking lot status by operators.
FR07	Administrator must be able to reply to enquiries and generating the essentially reports or outputs.

**Table No. 1**

### **Non-functional requirements:**

Non-functional requirements is a description of a variety of quality factors or attributes, which affect the functionality's effectiveness.

It describes how the behavior of the system and a standard or relevant functionality should be provided. Also, Non-functional requirements describe not related implementation with the system, but its evolution with time.

**Performance:** The proposed system must be highly efficient, effective and multi-functional in case of the performance. In terms of time efficiency, the system should complete the user process request within the five seconds.

**Scalability:** Scalability is also considered to be an important non-functional requirement, which helps a system to develop individual ability by coping up with the needs and requirements of business operation process. A proper and effective scalability management process should assist to provide effective customer services.

**Availability:** In terms of availability, the system must work for almost 24\*7. The operator should be able to access the required system during any time in a day.

**Usability:** In terms of usability, the particular system must be of higher quality. The admin should be able to perform tasks through the user friendly manual guide. However, this particular system should be of superior quality and user friendly.

**Data Integrity:** In terms of data integrity, this particular system must maintain the consistence and accuracy of the collected and stored data. Different authentic validation and checking methods should ensure the degree of integrity and validity of the data and information.

**System requirements:****A. Software Requirements:**

<b>Name of Component</b>	<b>Specification</b>
Operating System	Windows 7, Windows 10
Scripting Language	PHP
Database Language	SQL
Web Browser	Google Chrome, Microsoft Edge, Mozilla Firefox
Web Server	XAMPP Control
Software Development Kit	Notepad ++

**Table No. 2****B. Hardware Requirements:**

<b>Name of Component</b>	<b>Specification</b>
CPU Processor	Intel Core 2 Duo, Intel i3 7 <sup>th</sup> Gen
RAM	2 GB +
Hard Disk Space	50 GB
Monitor	14'', 15'' color display monitor

**Table No. 3**

## ENTITY RELATIONSHIP DIAGRAM

An E-R diagram is called Entity-Relationship Diagram which efficiently shows the relationships between various entities stored in a database. E-R diagrams provide the purpose of real-world modeling of objects which makes them intently useful. It gives a standard solution of visualizing the data logically.

The database analyst gains a better understanding of the data to be contained in the database through the step of constructing the ERD. Finally, the ERD is used to connect the logical structure of the database to users. In particular, the ERD effectively communicates the logic of the database to users.

### Components Used to Draw ER Diagram:

#### 1. Entity

An entity may be an object, place, person, or an event which stores data in the database. In an entity-relationship diagram, an entity is represented by a rectangle.

#### 2. Attributes

An attribute in an Entity-Relationship Model describes the properties or characteristics of an entity. It is represented by an oval or ellipse shape in the ER diagram. Every oval shape represents one attribute and is directly connected to its entity which is in the rectangle in shape.

##### 2.1 Key attribute

An attribute which can uniquely identify an entity in an entity set is called a key attribute. It represents a primary key in the ER diagram. In an Entity-Relationship diagram, the key attribute is denoted by an oval with an underlying line.

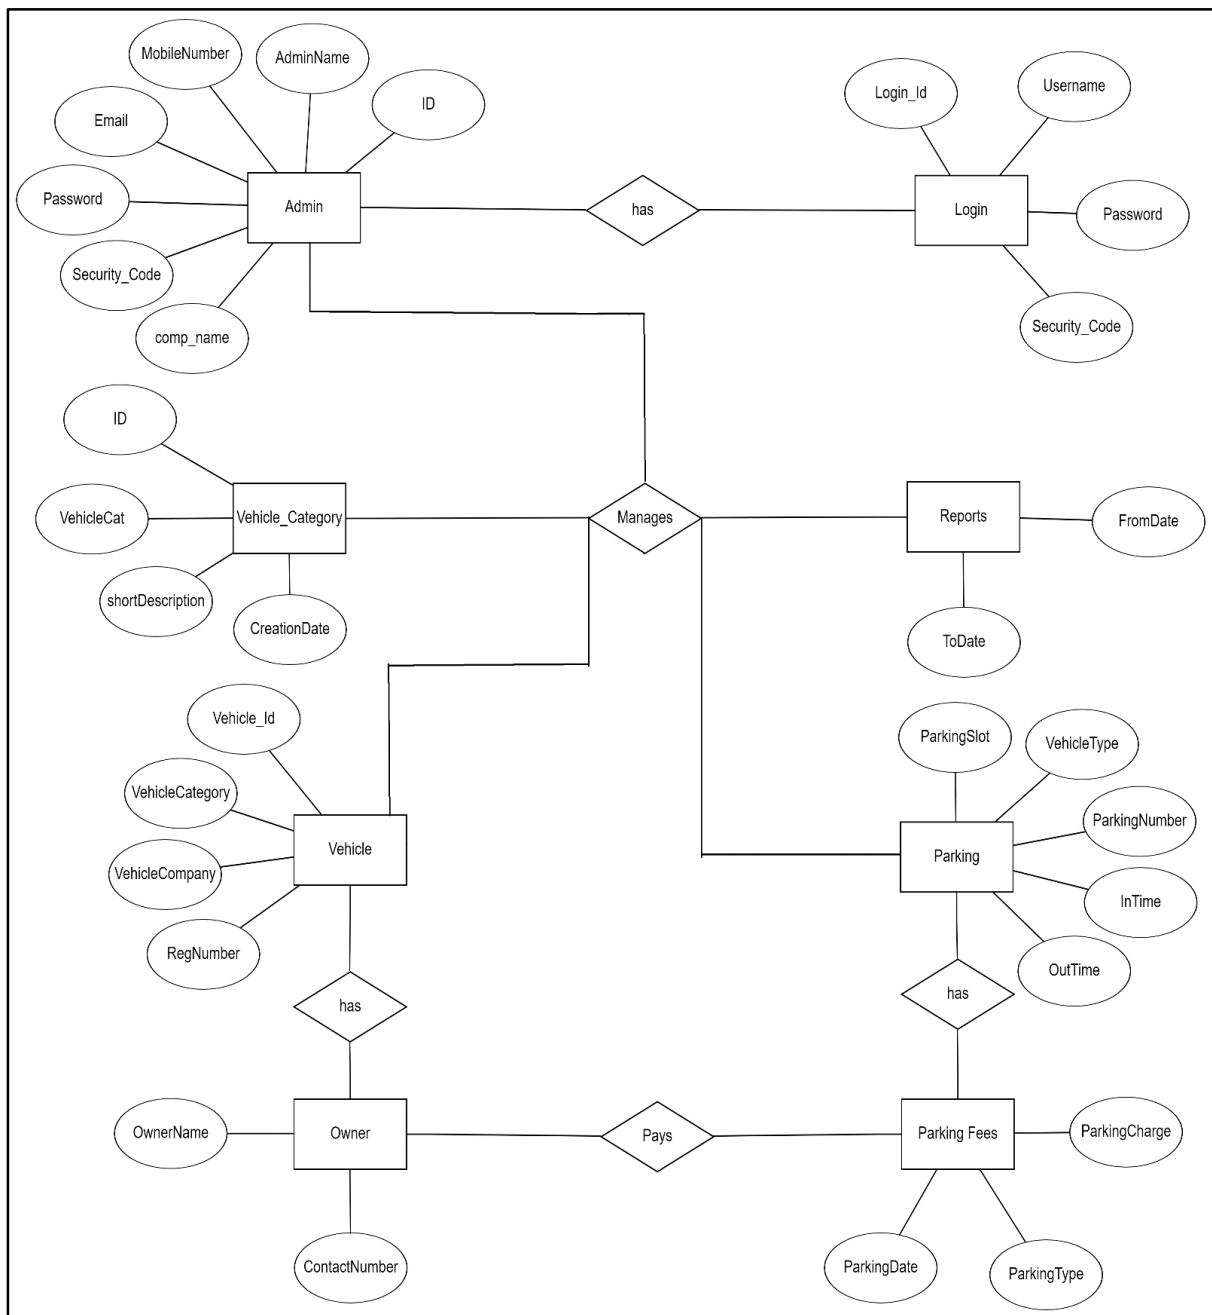

## 3. Relationships

A relationship in Entity-Relationship Model is used to describe the relation between two or more entities. It is represented by a diamond shape in the ER diagram.

### E-R diagram for Vehicle Parking Management System:

**Figure No. 1 ER Diagram**

## DATA DICTIONARY

A data dictionary contains metadata i.e data about the database. The data dictionary is very important as it contains information such as what is in the database, who is allowed to access it, where is the database physically stored etc. The users of the database normally don't interact with the data dictionary, it is only handled by the database administrators.

The data dictionary is a crucial component of any relational database. It provides additional information about relationships between different database tables, helps to organize data in a neat and easily searchable way, and prevents data redundancy issues.

The following figure lists all the tables in the database:

```

database changed
MariaDB [vehicle-parking-db]> show tables;
+-----+
| Tables_in_vehicle-parking-db |
+-----+
| admin                         |
| settings                     |
| vcategory                    |
| vehicle_info                  |
+-----+
4 rows in set (0.001 sec)

MariaDB [vehicle-parking-db]>

```

**Figure No. 2 All tables in the DB**

The following figure describes the schema of the '**admin**' table:

```

MariaDB [vehicle-parking-db]> describe admin;
+-----+-----+-----+-----+-----+-----+
| Field          | Type          | Null | Key | Default          | Extra          |
+-----+-----+-----+-----+-----+-----+
| ID             | int(10)       | NO   | PRI | NULL             | auto_increment |
| AdminName      | varchar(120)  | YES  |     | NULL             |                |
| UserName       | varchar(120)  | YES  |     | NULL             |                |
| MobileNumber   | bigint(10)    | YES  |     | NULL             |                |
| Security_Code  | int(55)       | NO   |     | NULL             |                |
| Email          | varchar(200)  | YES  |     | NULL             |                |
| Password       | varchar(120)  | YES  |     | NULL             |                |
| AdminRegdate   | timestamp     | YES  |     | current_timestamp() |                |
+-----+-----+-----+-----+-----+-----+
8 rows in set (0.026 sec)

```

**Figure No. 3 Admin Table**

The following figure describes the schema of the ‘**settings**’ table:

```
MariaDB [vehicle-parking-db]> describe settings;
```

Field	Type	Null	Key	Default	Extra
id	int(11)	NO	PRI	NULL	auto_increment
c_name	varchar(255)	NO		NULL	
c_email	varchar(55)	NO		NULL	
c_website	varchar(55)	NO		NULL	
c_address	varchar(255)	NO		NULL	
last_update	datetime	NO		current_timestamp()	

6 rows in set (0.004 sec)

**Figure No.4 Settings Table**

The following figure describes the schema of the ‘**vcategory**’ table:

```
MariaDB [vehicle-parking-db]> describe vcategory;
```

Field	Type	Null	Key	Default	Extra
ID	int(10)	NO	PRI	NULL	auto_increment
VehicleCat	varchar(120)	YES		NULL	
shortDescription	varchar(50)	NO		NULL	
CreationDate	timestamp	YES		current_timestamp()	

4 rows in set (0.004 sec)

**Figure No. 5 Vcategory Table**

The following figure describes the schema of the ‘**vehicle\_info**’ table:

```
MariaDB [vehicle-parking-db]> describe vehicle_info;
```

Field	Type	Null	Key	Default	Extra
ID	int(10)	NO	PRI	NULL	auto_increment
ParkingNumber	varchar(120)	YES		NULL	
VehicleCategory	varchar(120)	NO		NULL	
VehicleCompanyname	varchar(120)	YES		NULL	
RegistrationNumber	varchar(120)	YES		NULL	
OwnerName	varchar(120)	YES		NULL	
OwnerContactNumber	bigint(10)	YES		NULL	
InTime	timestamp	YES		current_timestamp()	
OutTime	timestamp	YES		NULL	on update current_timestamp()
ParkingCharge	varchar(120)	NO		NULL	
Remark	mediumtext	NO		NULL	
Status	varchar(5)	NO		NULL	

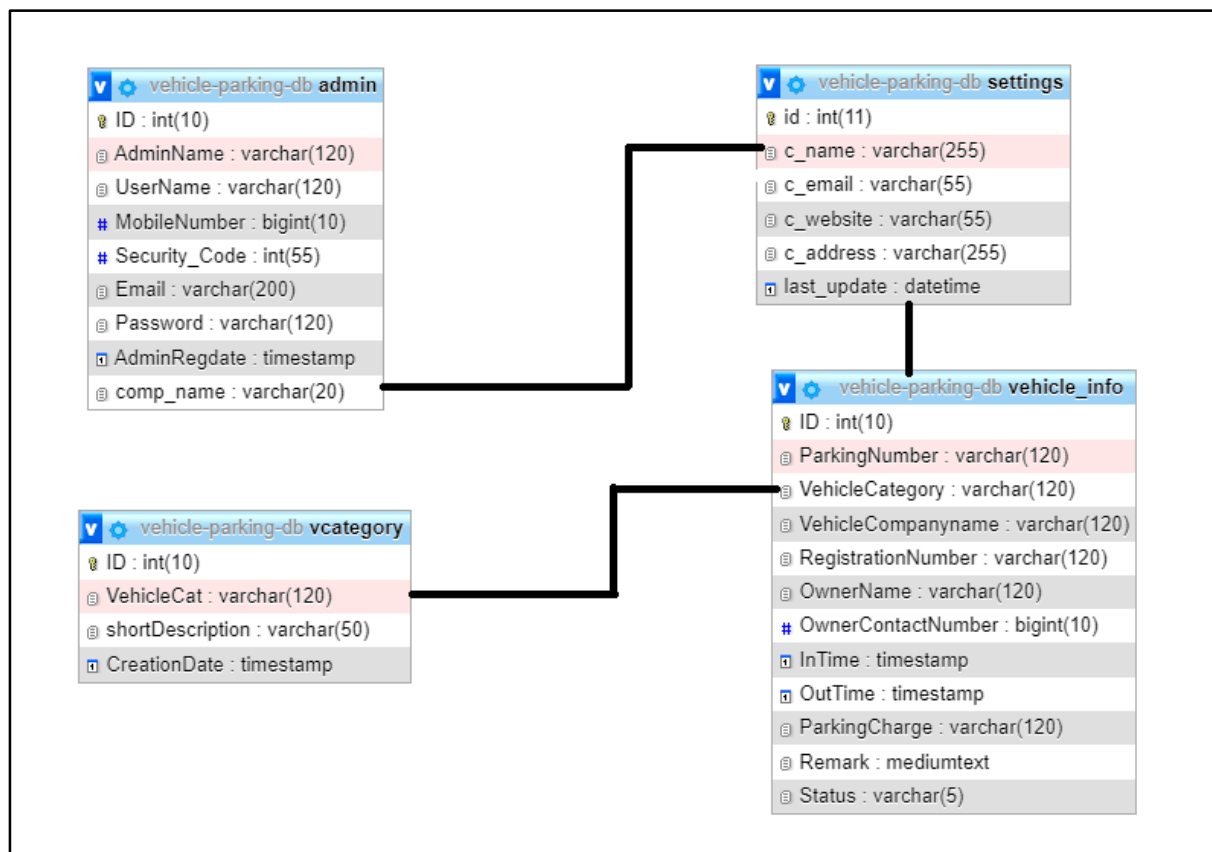

12 rows in set (0.004 sec)

**Figure No. 6 Vehicle\_info Table**

## RELATIONAL DATABASE DESIGN

The relational data model describes the world as “a collection of inter-related relations (or tables)”. A relational data model involves the use of data tables that collect groups of elements into relations. These models work based on the idea that each table setup will include a primary key or identifier. Other tables use that identifier to provide "relational" data links and results.

Relational database design (RDD) models information and data into a set of tables with rows and columns. Each row of a relation/table represents a record, and each column represents an attribute of data.

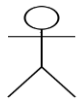

**Figure No. 7 Relational Model of DB**

## USE CASE DIAGRAM

A use case diagram is a graphical depiction of a user's possible interactions with a system. A use case diagram shows various use cases and different types of users the system has and will often be accompanied by other types of diagrams as well.

### Symbols used in Use Case diagram:

Sr. No.	Symbol	Name	Description
1		Actor	Actors are the actual users of a system.
2		Use Case	A use case is a written description of how users will perform tasks on your website.
3		Association	Communication link between actors and use cases.
4		Include	Additional use case relations to a use case required to carry out its functions.

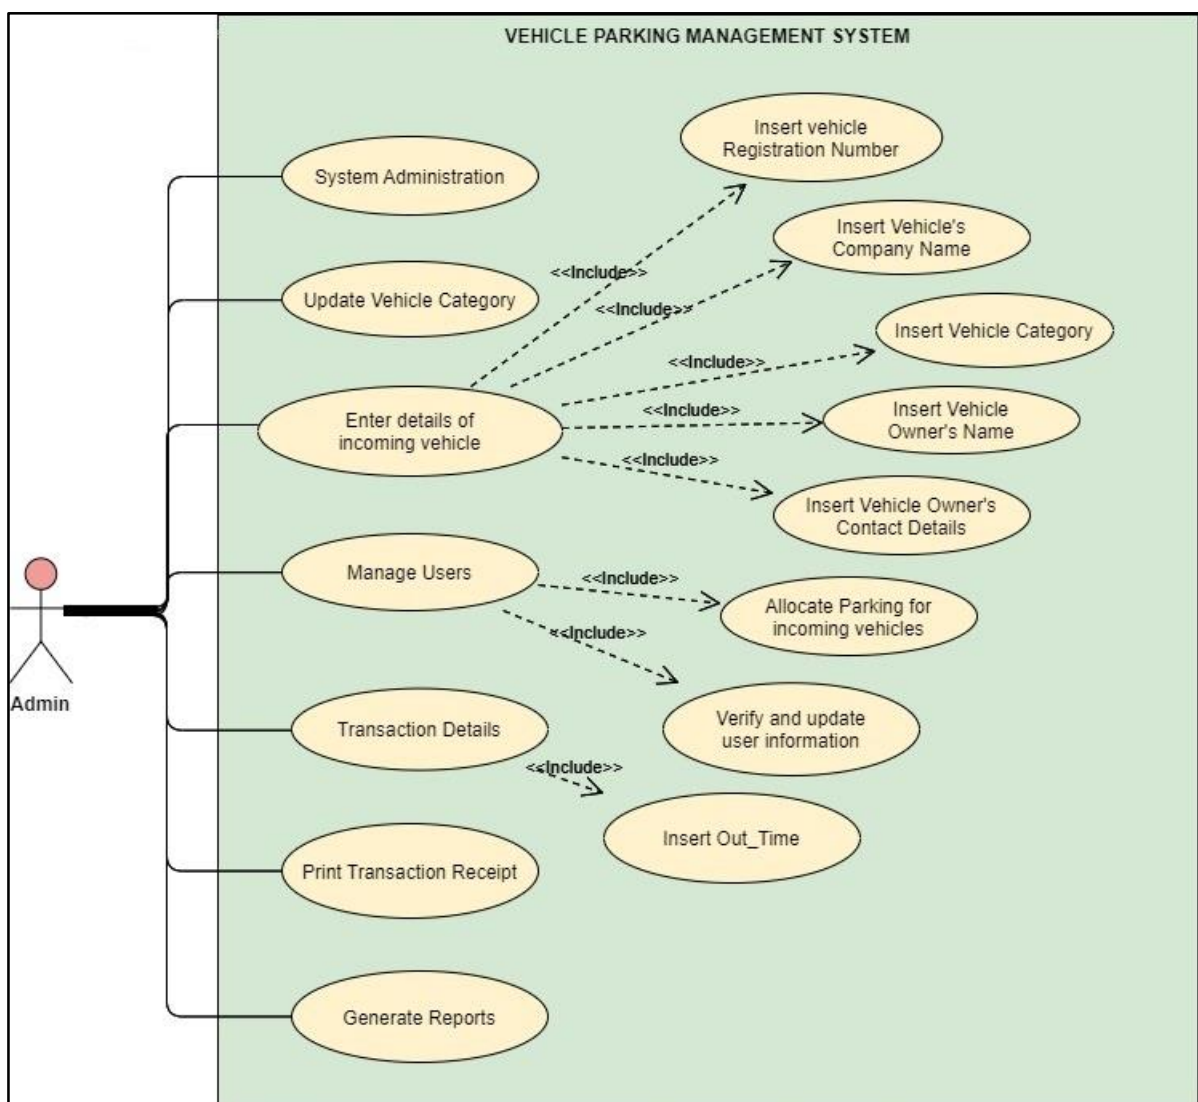

**Table No. 4**

Our systems Use case diagram modelling shows that the system has 1 admin actor who have different tasks and functions. The following is the description of admin actor of the use case diagram:

## Admin:

The system administrator must log in first to be able to manage parking data on the web. Admin will be responsible for all carrying out all the tasks in the system like handling administration, updating vehicle categories, adding new incoming vehicles, managing the visitors parking spots. Admin will provide fees that must be paid by visitors before going out. If the payment has been made the admin will provide an electronic fee paid receipt to the visitors. Admin can also be able to generate reports of given dates.

**Figure No. 8 Use Case Diagram of DB**

## DATABASE NORMALIZATION

Database Normalization is organizing non structured data in to structured data. Database normalization is nothing but organizing the tables and columns of the tables in such way that it should reduce the data redundancy and complexity of data and improves the integrity of data.

Database Normalization is used for following Purpose.

1. To Eliminate the redundant or useless data
2. To Reduce the complexity of the data
3. To Ensure the relationship between tables as well as data in the tables
4. To Ensure data dependencies and data is logically stored.

The data in table **vehicle\_info**:

<b>ID</b>	<b>ParkingNumber</b>	<b>VehicleCategory</b>	<b>VehicleCompany Name</b>	<b>Registration Number</b>	<b>Owner Name</b>	<b>OwnerContact Number</b>
1	96069	Four Wheeler	Mahindra	GGZ-1155	Deepak Mane	8956232528 ; 9890456321
2	52796	Two Wheeler	KTM	GTM-1069	Sanket Benkar	90890898901
3	65023	Three Wheeler	Auto	AT-123	Kiran Mane	8451236971 ; 8152743016
4	90880	Two Wheeler	Suzuki	PLO-8507	Aniket Shinde	9327536236 ; 8024578912
5	09894	Four Wheeler	Toyota	DLE-7701	Omkar Dhumal	9254654654
6	78915	Two Wheeler	Hero_Honda	GZG-7896	Karan Sonawane	8878999879; 7641857412
7	25207	Four Wheeler	Honda	LDC-7019	Deepak Margale	9486756435

**Table No. 5**

**1NF:**

The first normal form is the normal form of database where data must contain only atomic values and not contain repeating groups.

The OwnerContactNumber field in the table vehicle\_info has multi-valued attributes. Thus in order to convert the table in 1NF we have to make the attribute single valued. The same process is shown below where we have the table **vehicle\_info** after the first level normalization(1NF):

<b>ID</b>	<b>ParkingNumber</b>	<b>VehicleCategory</b>	<b>VehicleCompany Name</b>	<b>Registration Number</b>	<b>Owner Name</b>	<b>OwnerContactNumber</b>
1	96069	Four Wheeler	Mahindra	GGZ-1155	Deepak Mane	8956232528
1	96069	Four Wheeler	Mahindra	GGZ-1155	Deepak Mane	9890456321
2	52796	Two Wheeler	KTM	GTM-1069	Sanket Benkar	90890898901
3	65023	Three Wheeler	Auto	AT-123	Kiran Mane	8451236971
3	65023	Three Wheeler	Auto	AT-123	Kiran Mane	8152743016
4	90880	Two Wheeler	Suzuki	PLO-8507	Aniket Shinde	9327536236
4	90880	Two Wheeler	Suzuki	PLO-8507	Aniket Shinde	8024578912
5	09894	Four Wheeler	Toyota	DLE-7701	Omkar Dhumal	9254654654
6	78915	Two Wheeler	Hero_Honda	GZG-7896	Karan Sonawane	8878999879
6	78915	Two Wheeler	Hero_Honda	GZG-7896	Karan Sonawane	7641857412
7	25207	Four Wheeler	Honda	LDC-7019	Deepak Margale	9486756435

**Table No. 6**

**2NF:**

The data is said to be in second normalized form if,

1. It is in First normal form
2. There should not be any partial dependency of any column on primary key. Means the table have concatenated primary key and each attribute in table depends on that concatenated primary key.
3. All Non-key attributes are fully functionally dependent on primary key. If primary is not composite key then all non key attributes are fully functionally dependent on primary key.

The table **vehicle\_info(1NF) version** is split into two tables after the second level normalization(2NF):

Table A:

<b>ID</b>	<b>Parking Number</b>	<b>Vehicle Category</b>	<b>Vehicle Company Name</b>	<b>Registration Number</b>
1	96069	Four Wheeler	Mahindra	GGZ-1155
2	52796	Two Wheeler	KTM	GTM-1069
3	65023	Three Wheeler	Auto	AT-123
4	90880	Two Wheeler	Suzuki	PLO-8507
5	09894	Four Wheeler	Toyota	DLE-7701
6	78915	Two Wheeler	Hero_Honda	GZG-7896
7	25207	Four Wheeler	Honda	LDC-7019

**Table No. 7**

Table B:

ID	Owner Name	Owner Contact Number
1	Deepak Mane	8956232528
1	Deepak Mane	9890456321
2	Sanket Benkar	90890898901
3	Kiran Mane	8451236971
3	Kiran Mane	8152743016
4	Aniket Shinde	9327536236
4	Aniket Shinde	8024578912
5	Omkar Dhumal	9254654654
6	Karan Sonawane	8878999879
6	Karan Sonawane	7641857412
7	Deepak Margale	9486756435

**Table No. 8****3NF:**

The database is in Third normal form if it satisfies following conditions:

- i. It is in Second normal form
- ii. There is no transitive functional dependency

**Transitive Dependency:**

When table 1 is functionally dependent on table 2 and table 2 is functionally dependent on table 3 then, table 3 is transitively dependent on table 1 via table 2.

In the Table 1 of (2NF) we have ParkingNumber-> VehicleCompanyName and VehicleCompanyName->RegistrationNumber. So, ParkingNumber is transitively dependent on VehicleCompanyName. This violates the third normal form. Hence, we have to convert it into 3NF. For doing this we need to split the table into two parts as shown below:

Table A:

<b>ID</b>	<b>Parking Number</b>	<b>Vehicle Category</b>	<b>Vehicle Company Name</b>
1	96069	Four Wheeler	Mahindra
2	52796	Two Wheeler	KTM
3	65023	Three Wheeler	Auto
4	90880	Two Wheeler	Suzuki
5	09894	Four Wheeler	Toyota
6	78915	Two Wheeler	Hero_Honda
7	25207	Four Wheeler	Honda

**Table No. 9**

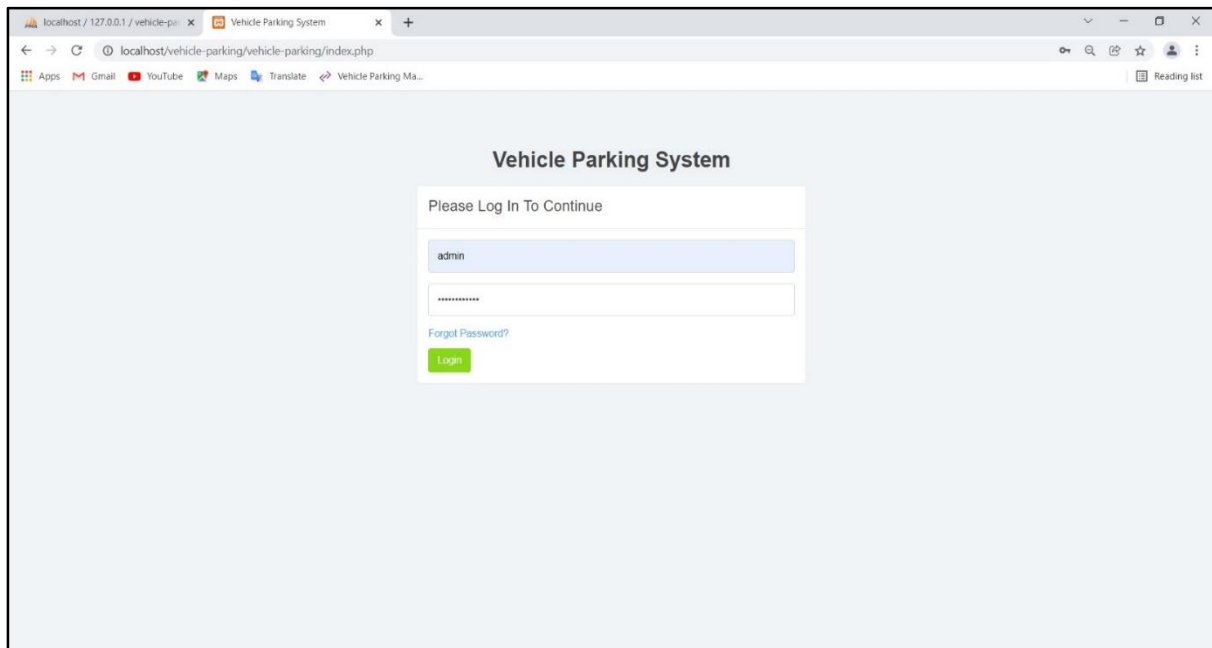

Table B:

<b>ID</b>	<b>Registration Number</b>
1	GGZ-1155
2	GTM-1069
3	AT-123
4	PLO-8507
5	DLE-7701
6	GZG-7896
7	LDC-7019

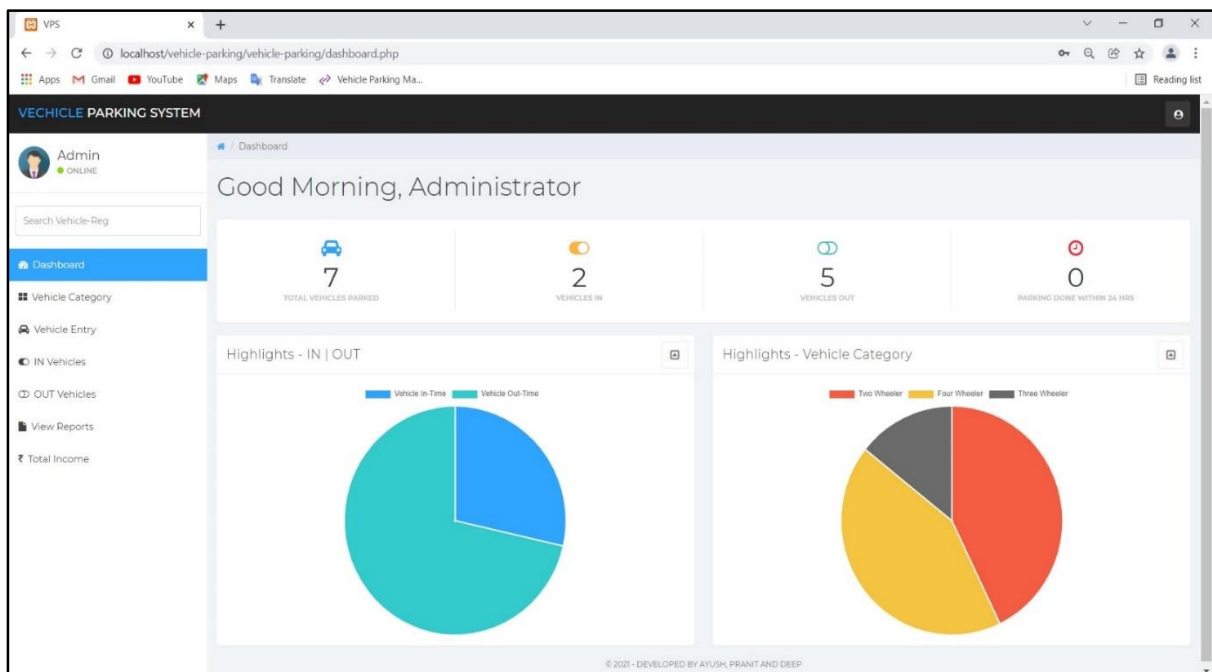

**Table No. 10**

## GRAPHICAL USER INTERFACE:

### Admin Login:

### Dashboard:

## Searching for details of a parked vehicle:

The screenshot shows the 'VEHICLE PARKING SYSTEM' interface. On the left, a sidebar lists navigation options: Dashboard, Vehicle Category, Vehicle Entry, IN Vehicles, OUT Vehicles, View Reports, and Total Income. The main content area is titled 'Search Vehicles' and displays 'Search Results - Based Upon Vehicle Registration Number'. A search bar contains 'GGZ-1155'. Below the search bar, a table lists the search results. The table has columns: #, Vehicle Reg. No., Company, Category, Parking Number, and Vehicle's Owner. One result is shown for vehicle GGZ-1155, registered to Mahindra, categorized as a Four Wheeler, with parking number CA-96069 and owner Deepak Mane. The interface also includes a 'Show 10 entries' dropdown, a search input field, and pagination controls (Previous, Next). A footer note states '© 2021 - DEVELOPED BY AYUSH, PRANIT AND DEEP'.

#	Vehicle Reg. No.	Company	Category	Parking Number	Vehicle's Owner
1	GGZ-1155	Mahindra	Four Wheeler	CA-96069	Deepak Mane

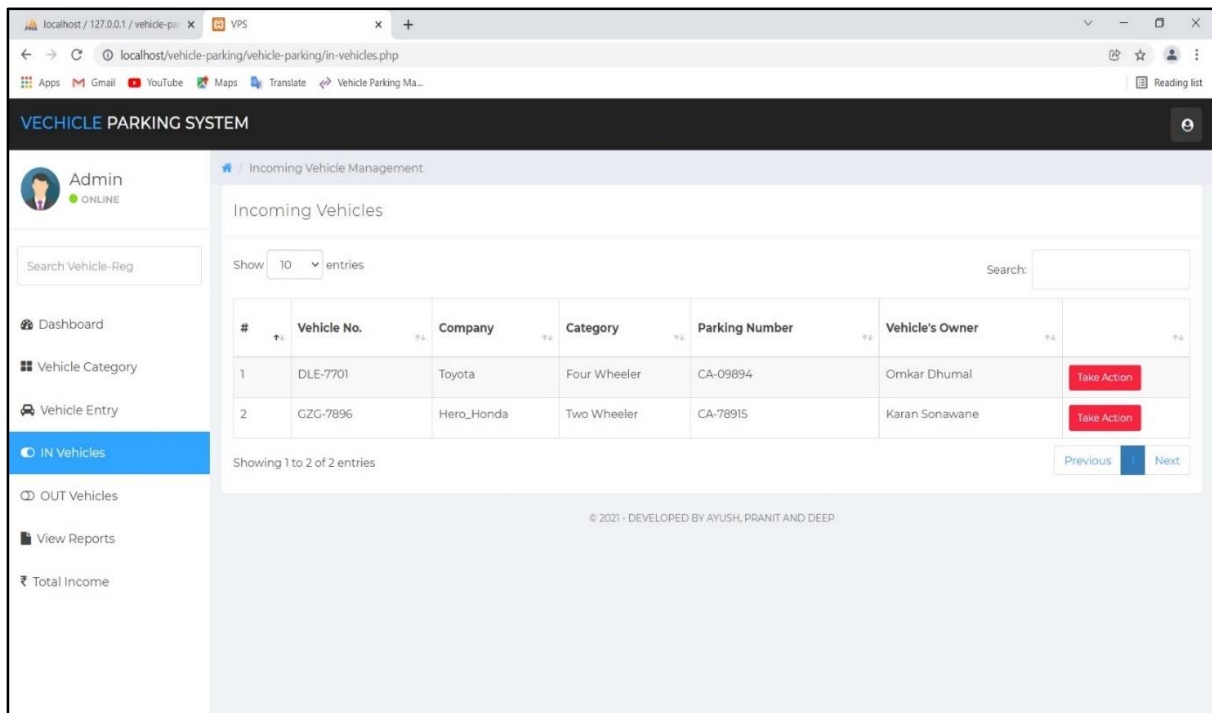

## Displaying and Updating the vehicle category:

The screenshot shows the 'VEHICLE PARKING SYSTEM' interface for 'Vehicle Category Management'. The sidebar on the left highlights 'Vehicle Category'. The main content area is titled 'Vehicle Categories' and includes a button to 'Add New Vehicle Category'. A search bar is present above a table. The table has columns: #, Vehicle Category, Published On, and Actions. It lists three categories: 'Four Wheeler' (published 2019-07-05 16:36:50), 'Two Wheeler' (published 2019-07-05 16:37:09), and 'Three Wheeler' (published 2021-03-07 22:11:57). Each row has edit and delete icons in the Actions column. The interface also features a 'Show 10 entries' dropdown, a search input field, and pagination controls (Previous, Next). A footer note states '© 2021 - DEVELOPED BY AYUSH, PRANIT AND DEEP'.

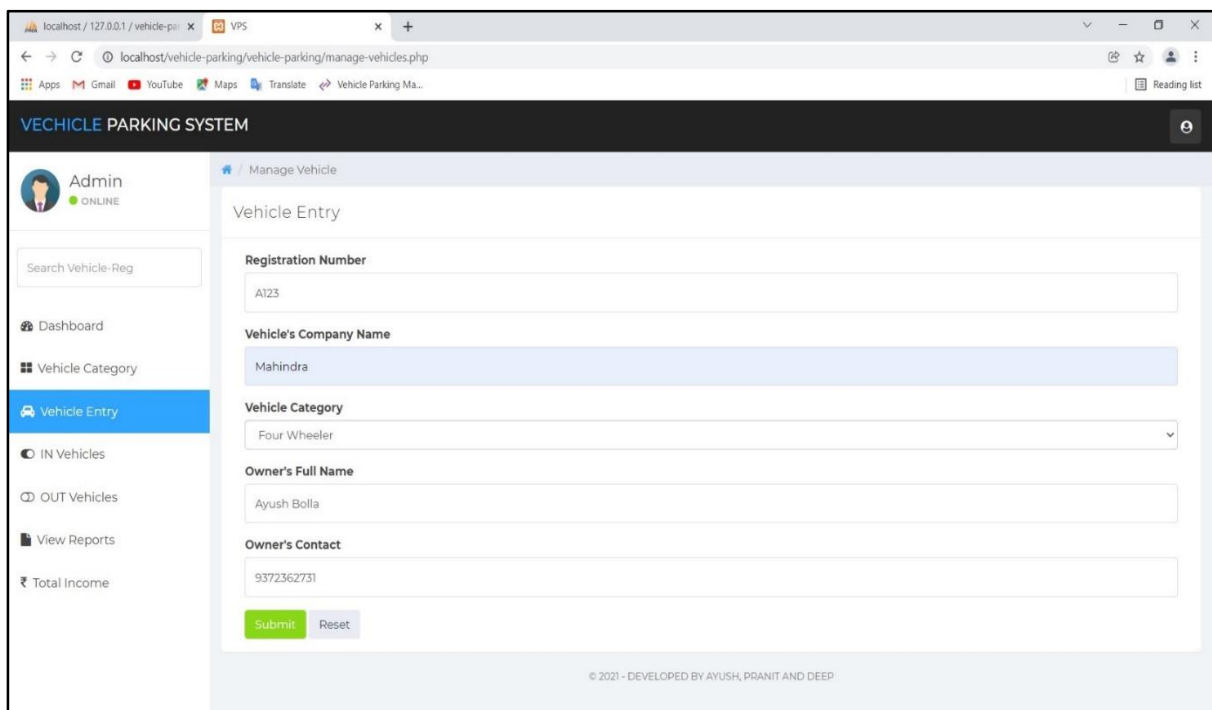

#	Vehicle Category	Published On	Actions
1	Four Wheeler	2019-07-05 16:36:50	
2	Two Wheeler	2019-07-05 16:37:09	
3	Three Wheeler	2021-03-07 22:11:57	

## Displaying List of parked vehicles:

## Adding new vehicle entries for parking:

# Vehicle Parking Management System

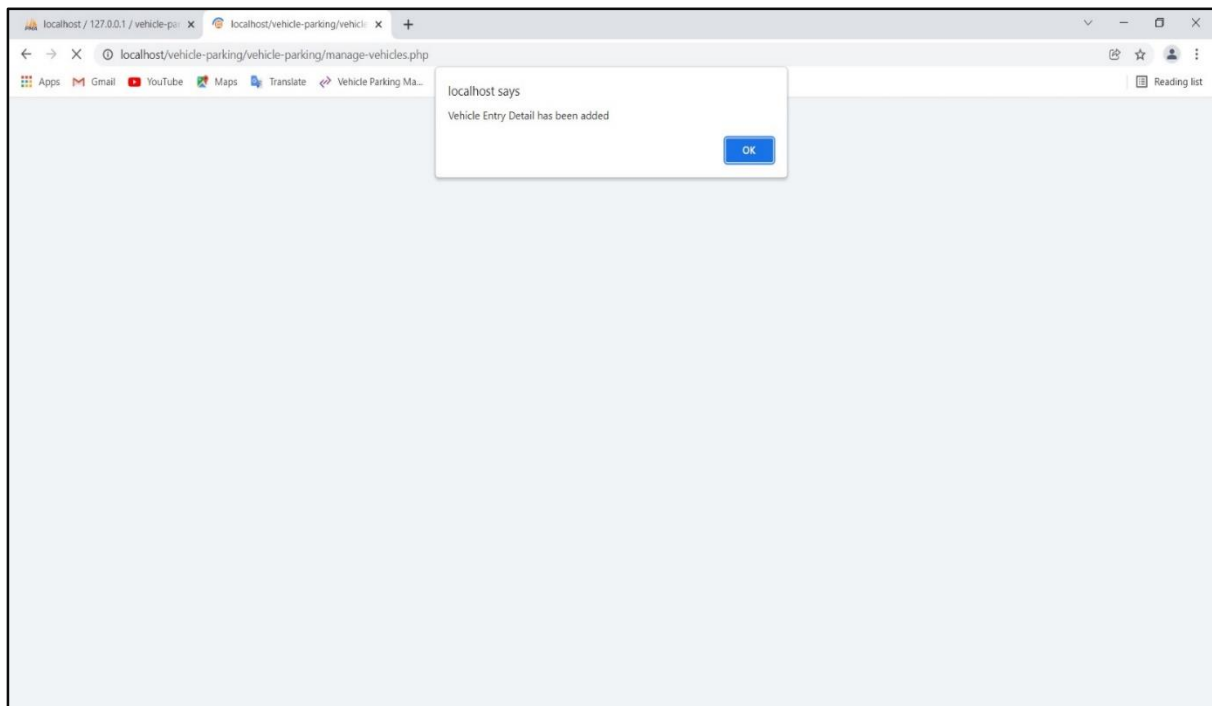

The screenshot shows a web browser window with the URL `localhost/vehicle-parking/vehicle-parking/manage-vehicles.php`. The page title is "VEHICLE PARKING SYSTEM". On the left, a sidebar shows the user "Admin" is online and lists navigation options: Dashboard, Vehicle Category, Vehicle Entry (highlighted), IN Vehicles, OUT Vehicles, View Reports, and Total Income. The main content area is titled "Manage Vehicle" and contains a "Vehicle Entry" form. The form fields are: "Registration Number" (B123), "Vehicle's Company Name" (Toyota), "Vehicle Category" (Four Wheeler), "Owner's Full Name" (Pranit Rathod), and "Owner's Contact" (9284627362). There are "Submit" and "Reset" buttons at the bottom of the form. A footer note states "© 2021 - DEVELOPED BY AYUSH, PRANIT AND DEEP".

Field	Value
Registration Number	B123
Vehicle's Company Name	Toyota
Vehicle Category	Four Wheeler
Owner's Full Name	Pranit Rathod
Owner's Contact	9284627362

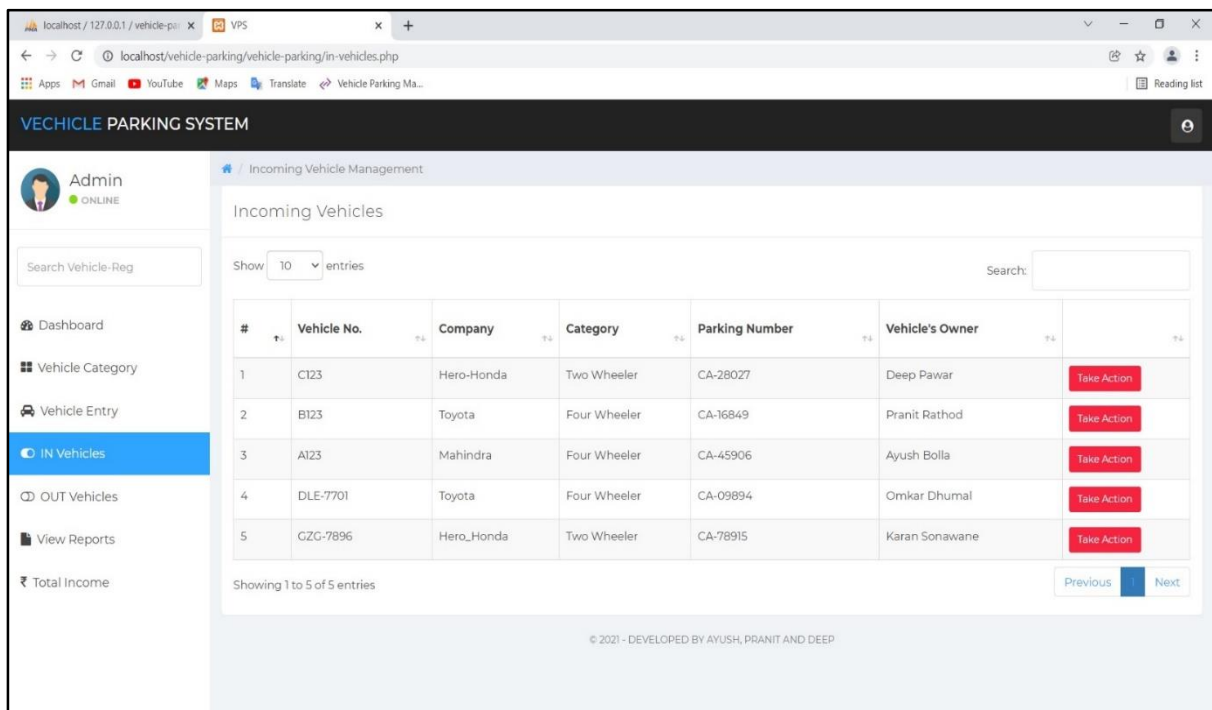

This screenshot shows the same "Vehicle Entry" form as the first image, but with different data entered. The browser window and sidebar remain the same. The form fields now contain: "Registration Number" (C123), "Vehicle's Company Name" (Hero-Honda), "Vehicle Category" (Two Wheeler), "Owner's Full Name" (Deep Pawar), and "Owner's Contact" (9403625142). The "Submit" and "Reset" buttons are still present at the bottom of the form. The footer note "© 2021 - DEVELOPED BY AYUSH, PRANIT AND DEEP" is also visible.

Field	Value
Registration Number	C123
Vehicle's Company Name	Hero-Honda
Vehicle Category	Two Wheeler
Owner's Full Name	Deep Pawar
Owner's Contact	9403625142

# Vehicle Parking Management System

## List of parking vehicles after adding new entries:

## Taking action on parked vehicles:

The screenshot shows a web browser window with the URL `localhost/vehicle-parking/vehicle-parking/update-incomingdetail.php?updateid=6`. The page title is "VEHICLE PARKING SYSTEM". The left sidebar shows the user "Admin" (ONLINE) and a menu with options: Dashboard, Vehicle Category, Vehicle Entry, IN Vehicles (selected), OUT Vehicles, View Reports, and Total Income. The main content area is titled "Manage Incoming Vehicles" and contains the following fields:

Vehicle Registration Number	CZG-7896
Company Name	Hero_Honda
Category	Two Wheeler
Parking Number	78915
Vehicle IN Time	2021-11-24 14:28:38
Vehicle Owned By	Karan Sonawane
Vehicle Owner Contact	

The screenshot shows the same web browser window, but the form is now for updating an incoming vehicle. The left sidebar is identical. The main content area shows the following fields:

Vehicle IN Time	2021-11-24 14:28:38
Vehicle Owned By	Karan Sonawane
Vehicle Owner Contact	8878999879
Current Status	Vehicle In
Total Charge	50
Status	Outgoing Vehicle
Remarks	Going Out

At the bottom of the form, there are two buttons: "Submit For Out-Going" (green) and "Reset" (grey). The footer of the page reads "© 2021 - DEVELOPED BY AYUSH, PRANIT AND DEEP".

## List of outgoing vehicles:

The screenshot shows the 'VEHICLE PARKING SYSTEM' interface. The left sidebar contains a user profile for 'Admin' (ONLINE) and a menu with options: Dashboard, Vehicle Category, Vehicle Entry, IN Vehicles, OUT Vehicles (selected), View Reports, and Total Income. The main content area is titled 'Outgoing Vehicle Management' and 'Outgoing Vehicles'. It features a search bar, a 'Show 10 entries' dropdown, and a table with 6 rows of vehicle data. Each row includes a serial number, vehicle number, company, category, parking number, charge, owner name, and buttons for 'View Details' and a lock icon. The footer indicates '© 2021 - DEVELOPED BY AVUSH, PRANIT AND DEEP'.

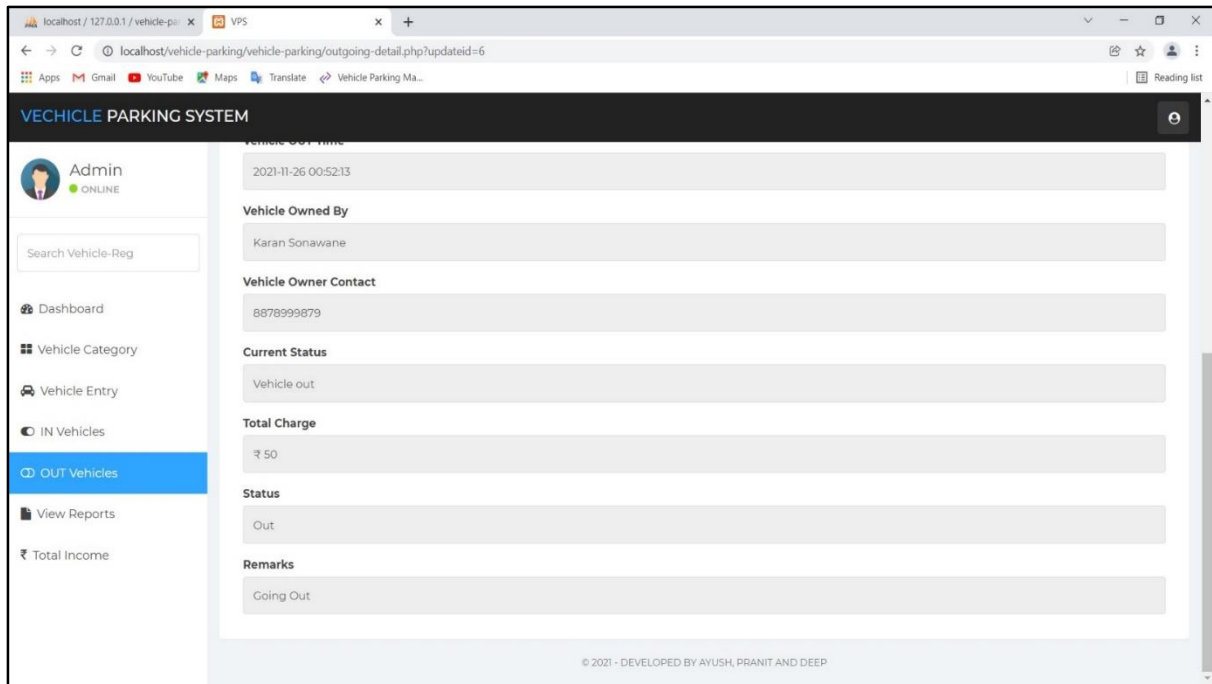

#	Vehicle No.	Company	Category	Parking Number	Charge	Vehicle's Owner	
1	GGZ-1155	Mahindra	Four Wheeler	CA-96069	₹50	Deepak Mane	<a href="#">View Details</a>
2	GTM-1069	KTM	Two Wheeler	CA-52796	₹50	Sanket Benkar	<a href="#">View Details</a>
3	AT-123	Rikshaw	Three Wheeler	CA-65023	₹50	Kiran Mane	<a href="#">View Details</a>
4	PLO-8507	Suzuki	Two Wheeler	CA-90880	₹50	Aniket Shinde	<a href="#">View Details</a>
5	GZG-7896	Hero_Honda	Two Wheeler	CA-78915	₹50	Karan Sonawane	<a href="#">View Details</a>
6	LDC-7019	Honda	Four Wheeler	CA-25207	₹50	Deepak Margale	<a href="#">View Details</a>

## Display outgoing vehicles:

The screenshot shows the 'VEHICLE PARKING SYSTEM' interface with the 'Manage Outgoing Vehicles' form. The left sidebar is identical to the previous screenshot. The main content area is titled 'Vehicle Category Management' and 'Manage Outgoing Vehicles'. It contains a form with the following fields: Vehicle Registration Number (GZG-7896), Company Name (Hero\_Honda), Category (Two Wheeler), Parking Number (78915), Vehicle IN Time (2021-11-24 14:28:38), Vehicle OUT Time (2021-11-26 00:52:13), and Vehicle Owned By.

## TESTING DOCUMENT

### Test Cases

Test cases are good in revealing the presence of faults. Successful in implementation of test cases implies that there is no error in program. Test cases should be minimum as they are expensive in case of money & efforts. Primary objectives of test cases are to ensure that if there is an error or fault in program it is exercise by the test cases. An ideal test case set is one that succeeds only if there are no errors in the program. One possible ideal set of test case is one that includes all possible I/P to the program and is called exhaustive testing. A test case is good if it detects in undiscovered error in program.

### Test cases of Vehicle Parking Management System:

Sr. No	Input values	Expected Output	Actual Output	Result
1	Login in without entering User name and password	Error message Enter a valid User id and password	Error message Enter a valid User id and password	No Error
2	Login with wrong User Id and password	Error Message Enter correct valid User id and password	Error Message Enter correct valid User id and password	No Error
3	Click on Forgot Password	Asks for security code and Email ID	Asks for security code and Email ID	No Error
4	Login with correct User Id and password	Directed to Dashboard Page	Directed to Dashboard Page	No Error
5	Select Vehicle Category from Side Menu	Show all Vehicle Category	Show all Vehicle Category	No Error

## Vehicle Parking Management System

<b>6</b>	Select Vehicle Entry from Side Menu	Must be able to enter new vehicle details	Must be able to enter new vehicle details	No Error
<b>7</b>	Select IN Vehicles from Side Menu	Show updated list of parked vehicles details	Show updated list of parked vehicles	No Error
<b>8</b>	Select Take Action	Show details of respective vehicle and owner with Total parking charge	Show details of respective vehicle with Total parking charge	No Error
<b>9</b>	Select OUT Vehicles from Side Menu	Show updated list of Outgoing vehicles	Show updated list of Outgoing vehicles	No Error
<b>10</b>	Click on Print	Print Vehicle parking fees receipt	Print Vehicle parking fees receipt	No Error
<b>11</b>	Select View Reports from Side Menu	Display report of all vehicles parked till given dates	Display report of all vehicles parked till given dates	No Error
<b>12</b>	Select Total Income from Side Menu	Display Total parking charge collected till date	Display Total parking charge collected till date	No Error
<b>13</b>	Click Logout	Directed to the admin login page	Directed to the admin login page	No Error

**Table No. 11**

## CONCLUSION

Parking Management System is an essential part of the whole parking process for parking operators. Parking management without a parking management system is difficult and even impossible nowadays. Online vehicle parking reservation system improves the existing system since we are in computerized world. It will save costs, time and energy. With this new system is mandatory, it enables the user of the system (System administrator) to manage the parking space and to store and keep the record of vehicle and its owner's details in a fast and easy way, this reduces the wasting of time of employee to manually write and keep all the data.

The system helps an individual to keep the track of the parking spot and the vehicle and it's owner's details from the distant area, reducing traffic congestion and allowing the operator to manage all the things at one place. Our parking management solution can significantly offer benefit to the parking lot owner as it helps in reducing traffic by enhancing user experience. This system supports various parking applications that can easily handle and organize the data of vehicles. To rectify the complications of parking security, our parking management system allows admin to verify details and validate the automobiles at both entry and exit points.

The advantage of online parking management system is that it can easily be designed, installed, implemented, used and managed. That is why our parking management system is created to require minimal training for the employees. It has a well-organized structure and can be easily operated by any parking management staff members. Not only our parking management system is comfortable, but it will improve the whole parking lot management process. The online vehicle parking management system is a cost-effective technology. Thanks to it, we will be able to decrease your parking management costs and manage far more effectively your parking areas. Also, we will need less staff and manpower, because the system works automatically. That means that we will save a lot of money from manual labour, resource exhaustion and energy.
